

Communications Infrastructure

No other EMS provider can truly design, manufacture and support carrier and enterprise class communications equipment like Sanmina-SCI.

Sanmina-SCI has a long and results-driven history serving the communications industry, providing high-reliability wireless, optical networking, wireline transmission and enterprise networking systems. Even more, as new technologies develop, our product portfolio has expanded to include optical switches, wireless base stations, wireline switches, routers, transceivers, satellite receivers and RF equipment, among others. Our high-level of technical expertise and industry know-how makes us a natural choice for leading technology companies in the communications marketplace.

COMPLETE SYSTEM CAPABILITY

Sanmina-SCI is a leading EMS provider offering complete end-to-end manufacturing solutions to the communications industry. We manage the entire product life cycle, providing advanced engineering and design, full system assembly, test and delivery of complete systems.
