
Columns

Table 20. Work with PFD Definitions columns

Column	Description
Opt	Specifies the number of the task in the <i>Opt</i> prompt beside the PFD definition you want to perform the task with.
PFD definition	You can type the same option next to more than one PFD definition at a time, and you can also type different options next to different PFD definitions at the same time. Shows a list of all the PFD definitions in the specified file that meet the subset criteria. You can use the top position in the list to type a PFD definition you want to create or select another option.
Text	The text description of the PFD definition is shown.
Changed	The date of the last change to the PFD definition is shown.

Showing a PFD Definition List

The PFD definitions can be listed on the lower part of the display by specifying the *Library* prompt and *File* prompt. When you want to change the content of the list, specify the name of a file and library, and press the Enter key. You can page up or down the list on the display by specifying the starting characters in the *Position to* prompt.

Note: When you specify any of the *PFD Definition* prompt, *File* prompt, and *Library* prompt, you can **not** specify the *Opt* column.

Selecting a PFD Definition from a List

The list on the display contains the names of all or specified subset of the PFD definitions that exist in the PFD definition file indicated by the *File* prompt. The text that describes the PFD definitions and the date of the last change to the PFD definition are also shown in the list.

When a list is shown, a one-word indicator always appears below and to the right of the list to tell you where you are in the list. **More...** means that there are more items after the item currently shown. **Bottom** means that you are at the end of the list.

Use the Page or Roll keys to move forward or backward through the list.

If you are creating a PFD definition, you can check this list to see what names are already used before you choose a new name. You can create a PFD definition by typing 1 and a PFD definition name in the first list position, and you can select other PFD definitions from the list using any of the options except 1 (Create).

Therefore, you can select one or more names by doing one or both of the following:

- In the *Opt* column beside the PFD definition name in the list that you want to use, type the number of the option (task) to be used.
- In only the first (top) position of the list, type an option number (for the task), and a PFD definition name in the *Opt* and *PFD Definition* columns respectively.
